Preface	xxi
About the Authors	xxv

I Why Conservation Is Needed

I	Humans Are the Dominant Ecological Force	1
	The Human Meteorite: Growth and Impact of the Human Population	4
	How Birth and Death Rates Change with Economic Well-Being	5
	Significance of Per Capita Consumption and Technological Efficiency in Analyzing Human Population Impacts	6
	A Global Assessment of Human Impacts	8
	The Extinction Crisis	8
BOX 1.1	The Sky Is Falling—Or Is It?	12
	Habitat Loss	12
	Overexploitation	14
	Invasive Species	16
BOX 1.2	The Importance of Quantitative Thinking in Conservation Science	17
	Global Climate Change	18
	The Overuse and Abuse of Fresh Water	19
	Alterations of the Nitrogen Cycle	19
	Tracing the Origins and Underlying Values of Conservation Science	20

A Long History of Debating “Protection” versus “Use” as Conservation Ideals	21
The Wilderness Ideal	23
Balance of Nature	24

The End of Nature or a New Dawn?	25
----------------------------------	----

CONSIDER THIS Is De-extinction a Viable Conservation Tool?	30
---	----

2 Biodiversity and Extinction 34

What Are Species, and How Many Exist?	36
---------------------------------------	----

The Difficulty of Defining Species	37
------------------------------------	----

BOX 2.1 The Red Wolf Dilemma 38

How Many Species Exist?	41
-------------------------	----

Extinction: The Death of Species	44
----------------------------------	----

Some Species Are More Likely to Become Extinct Than Others	45
--	----

Estimating the Rate of Extinction from Direct Observation	47
---	----

BOX 2.2 Extinction Is Hard to Prove and Easy to Miss 49

Estimating the Rate of Extinction Indirectly: The Species-Area Approach	50
---	----

Limitations of the Species-Area Approach	53
--	----

Functional Extinction and Changes in Abundance as Measures of Biodiversity Loss	55
--	----

Local versus Global Trends in Number of Species	56
---	----

Biodiversity within Species: Genetic Variation	57
--	----

The Diversity of Ecological Communities	59
---	----

CONSIDER THIS Are We, or Are We Not, in the Midst of a Sixth Mass Extinction Event?	61
--	----

3 Ecosystem Services: Accounting for Nature’s Value 65

Ecosystem Services Link Conservation with Human Well-Being	67
--	----

Intact Ecosystems and Protection of Humans from Catastrophe	67
---	----

Ecosystem Protection and Human Health	69
---------------------------------------	----

Ecosystem Protection and Poverty Alleviation	70
--	----

Categorizing and Assessing Trends in Ecosystem Services	70
---	----

Provisioning Ecosystem Services	71
---------------------------------	----

Regulating Ecosystem Services	72
-------------------------------	----

	Habitat or Supporting Ecosystem Services	72
	Cultural Ecosystem Services	73
	The Global Status of Ecosystems and Ecosystem Services	74
	Are Ecosystem Services Connected to Biodiversity?	76
	Assigning Monetary Value to Ecosystem Services	81
	Benefits and Challenges of Economic Valuation	81
	Ways of Estimating Economic Value	84
	Choosing among Valuation Methods	88
	Payments for Ecosystem Services (PES)	88
	Servicesheds and Protecting People against the Loss of Ecosystem Services	90
BOX 3.1	INVEST: Integrated Valuation of Ecosystem Services and Trade-Offs	92
CONSIDER THIS	Does Economic Valuation Undermine the Noble Ideal of Protecting Nature for Nature's Sake?	94

II Policy, Protected Areas, and Planning

4 Policy Responses to Biodiversity Loss and Ecosystem Degradation 97

	The Emergence of U.S. Laws to Protect Endangered Species	99
	Challenges in Applying the Endangered Species Act	102
BOX 4.1	Applying the Endangered Species Act to Salmon	106
	The ESA Steeped in Controversy	108
	Incentives to Encourage Listed Species on Private Land	108
	How Effective Is the Endangered Species Act?	111
	Laws for Biodiversity Protection in Other Nations	113
	International Conservation Agreements	114
BOX 4.2	Earth Jurisprudence: Ecuador's Constitutional Protections for Nature	115
	The Rio Earth Summit and the Convention on Biological Diversity	117
	Montreal Protocol as a Model for Success: Why Did It Work So Well?	120
CONSIDER THIS	How Can Science Effectively Inform Policy?	122

5 Protected Areas: A Cornerstone of Conservation 125

National Parks—The First Official Protected Areas 127

Terrestrial Protected Areas 128

Global Status and Trends in Terrestrial Protected Areas 128

How Effective Are Terrestrial Protected Areas? 133

Marine Protected Areas: Global Status and Trends 138

BOX 5.1 Global Trade and Food Substitutability: Implications for Marine Conservation and MPAs 141

Other Strategies for Nearshore Marine Conservation 141

The Dark Side of Protected Areas: Displacement of People 142

Beyond Protected Areas: Integrating Economic Development and Conservation 145

Protecting Nature on Privately Owned Lands 147

Nongovernmental Agents Purchasing Lands for Conservation 148

Conservation Easements and Covenants: Protection without Land Ownership 150

CONSIDER THIS Trading Up or Setting a Bad Precedent? 151

6 Conservation Planning and Priorities 155

Establishing Global Geographic Priorities for Conservation 157

BOX 6.1 Some Not-So-Hot Consequences of Hotspots 159

Ecoregions as a Platform for Science-Based Conservation Planning 161

Producing a Conservation Plan 164

Identify Conservation Targets and Indicators 164

Inventory the Region for Targets and Threats to Those Targets 165

Set Conservation Goals 167

Design a Network of Conservation Areas 168

Conservation Planning in a Changing World 169

Incorporating People and Ecosystem Services into Conservation Planning 170

Conservation Planning for the Marine Environment 175

The Future of Conservation Planning 176

III How Science Informs Conservation Strategies

7 The Perils of Small Populations 183

Demographic Stochasticity 185

Environmental Stochasticity 188

The Allee Effect 189

The Genetic Problems of Small Populations: Inbreeding and Genetic Drift 192

Effective Population Size 195

Management Applications of Effective Population Size 202

The “Extinction Vortex” 202

BOX 7.1 Should Conservation Science Focus More on Prevention Than on Cure? 204

CONSIDER THIS How Far Will Society Go to Prevent an Extinction? 205

8 Population Size, Trend, and Viability 211

Estimating Population Size 213

Sampling and Extrapolation 214

Mark-Recapture Techniques 216

Animal Sightings 219

Estimating Past Population Size 220

Why Estimating Trend Is So Challenging 222

A Simple Model of Population Change 223

Randomness Happens 224

Distinguishing Trend from Noise 225

BOX 8.1 What Goes Up Must Come Down? 226

Demographic Matrix Models 228

A Demographic Matrix for Little Brown Bats 231

Population Viability Analysis	233
A Population Viability Analysis for Little Brown Bats	236
Applying PVA in a Changing World	238
Minimum Viable Population	241

CONSIDER THIS Long-Term Climatic Cycles Complicate Population Predictions 242

9 Assessing Threats and Choosing Conservation Actions 246

The Conservationist’s Toolkit: Manipulative Experiments, Observational Studies, and Models 248

Case Study: Assessing Threats to Coral Reef Ecosystems 250
 Local Threats to Corals: Overfishing and Pollution 251

Case Study: A Demographic Matrix and Two Possible Routes to Recovery for Loggerhead Sea Turtles 254

Case Study: The Plight of Salmon in the Northwestern United States 258
 Spotlight on Dams and the Primary Threat to Salmon 259

BOX 9.1 Structured Decision Making: Because Scientists Do Not Make the Decisions 260

 A Demographic Matrix to Help Sort Out Multiple Potential Threats 262
 Ways to Use Observational Data to “Fish” for Patterns 264

CONSIDER THIS The Power of the Positive: Overcoming Threats by Finding the Bright Spots 272

10 Islands of Nature and the Role of Dispersal 276

Using Ecology to Design an Ideal Network of Protected Areas 278
 The Equilibrium Theory of Island Biogeography 279
 The Choice between Single Large and Many Small Reserves 282
 Edge Effects 286

Subdivision of a Single Species into Smaller Populations:

The Metapopulation Concept 287
 Mathematical Models of Metapopulation Dynamics 289
 Metapopulation Theory and the Management of Endangered Species 292

	Increasing Connectivity: Dispersal Corridors to Link Fragmented Patches	294	
	A Manipulative Experiment to Test the Pros and Cons of Corridors		296
BOX 10.1	Increased Connectedness Also Entails Risks	298	
	Genetic Analyses Can Guide Decisions about the Need for Corridors	298	
	Using the Inbreeding Coefficient to Measure the Genetic Differences and Degree of Isolation of Subpopulations		299
BOX 10.2	Bridging Islands of Wilderness in the United Kingdom Boosts the Eurasian Red Squirrel's Genetic Diversity	300	
	How Measures of Genetic Differences Have Influenced the Design of Conservation Strategies		303
CONSIDER THIS	Creating an Artificial Metapopulation to Reduce Extinction Risk		306

II Restoration and Reintroduction: Measures of Last Resort 310

	Restoration: Assisting in the Recovery of Degraded Habitat	312	
	Different Degrees of Damage Require Different Types of Intervention		312
	Different Restoration Objectives Require Different Methods		316
	Lost Memories of Past Conditions		319
	When History Is Not the Guide to Restoration		320
BOX 11.1	Can Restoration Pay for Itself?	321	
	The Reintroduction and Translocation of Species		323
BOX 11.2	Managing Public Opposition to a Predator Reintroduction: Wolves in the Greater Yellowstone Area	324	
	Rebuilding Nearly Extinct Species with Captive Breeding and Safe Havens		325
	Reintroductions Can Sometimes Require Constant Life-Support Services		327
	Rehabilitating Sick or Injured Animals		329
	<i>Ex situ</i> Conservation: Zoos, Aquaria, Botanical Gardens, and Arboreta	330	
	The Banking and Cloning of Genetic Information		332
CONSIDER THIS	Novel Ecosystems Are Causing Conservationists to Rethink What Is "Natural"		334

12 Adaptive Management and Evidence-Based Conservation 338

Adaptive Management 340

The Value of Monitoring 346

BOX 12.1 Citizen Science in Support of Conservation 350

Evidence-Based Conservation: Seeing the Big Picture 352

The Precautionary Principle 356

CONSIDER THIS The Hardest Adaptive Management Decision Is When to Give Up 357

IV Conservation Challenges in a World Shaped by Humans

13 Reversing Global Deforestation and Forest Degradation 362

Forests Are the Largest Terrestrial Habitat for Biodiversity 363

BOX 13.1 Is the Human Domination of Forests Really Anything New? 364

Ecosystem Services from Forests 366

Tracking Global Deforestation 368

BOX 13.2 Brazil's Remarkable Success at Reducing Deforestation 370

Roads Can Be a Major Liability to Forest Conservation 371

Positive Feedbacks among Fire, Land Management, and Climate Change 372

The Link between Fire and Land Management 374

Fire and Global Climate Change 376

Positive Directions for the Future of Forest Conservation 377

Alternative Sources of Fiber, Building Materials, and Fuel 377

Sustainable Forestry 378

Economic Instruments to Protect Forests 379

The Challenge of Evaluating the Effectiveness of Forest Protection 380

CONSIDER THIS Could Managing Forests for Timber Production Be a Win-Win for Forest Conservation? 383

14	Balancing Agriculture and Conservation	386
	High-Yield, Land-Sparing Agriculture	389
	Trade-Offs from Agricultural Intensification: Fertilizers	391
BOX 14.1	Deformities in Amphibians Linked to Agricultural Water Pollution	392
	Trade-Offs from Pesticide Use	396
	The Potential Role of Genetic Engineering in High-Yield, Land-Sparing Agriculture	398
	Is Wildlife-Friendly Agriculture Also Sustainable Agriculture?	400
	Vanishing Soils and the Challenge of Maintaining Soil Fertility	400
	Natural Pest Control	402
	Increasing Habitat Heterogeneity	403
	Choosing the Best Strategy for Both Conservation and Agriculture	405
	Wildlife-Friendly Agricultural Practices Increase Biodiversity for Some, but Not All, Groups	406
	Wildlife-Friendly Agricultural Practices Decrease Yields for Most Crop Types	409
	Impacts beyond the Field: Nonlocal Effects of High-Yield Agriculture	410
	Conservation and Human Needs Meet in Agriculture	410
	Can Sustainable Practices Also Generate High Yields?	411
BOX 14.2	Growing Coffee, Conserving Biodiversity, and Alleviating Poverty	412
CONSIDER THIS	What's on the Conservationist's Dinner Plate?	414
15	Maintaining Sustainable Marine Fisheries	419
BOX 15.1	Pollution in the Marine Environment	422
	Issues in the Management of Marine Species	423
	Overharvest	423
	How Common Is Overharvest?	425
	Bycatch	429
	Fishing down the Food Web	432
	Overcoming the Tragedy of the Commons: Sustainable Solutions for Marine Management	434
	Restricting Fishery Access: From Marine Protected Areas to Fishing Gear Regulations	436
	Sustainability Certification	437

	The Shared “Ownership” of Fisheries	439
BOX 15.2	Trawler Buyback in California	440
	Can Humanity Get More Food from the Ocean?	442
BOX 15.3	Can Certification Schemes Make Aquaculture More Sustainable?	444
CONSIDER THIS	Close the High Seas to Fishing?	446

16 Managing Fresh Water for People and Nature 448

	The Conservation Value of Freshwater Ecosystems	449
	Major Threats to the Quantity and Quality of Fresh Water	451
	Taking More Than Our Share	451
BOX 16.1	Water for an Urban Planet	454
	Disrupting the Flow	454
	Water Pollution	456
BOX 16.2	Balancing the Pros and Cons of Dams	458
	Potential Solutions	458
BOX 16.3	Endocrine-Disrupting Contaminants	460
	Reducing Water Pollution	462
	Restoring the Flow	462
	Economic Valuation of and Payments for Ecosystem Services	466
	Reducing Waste and Inefficiency	469
CONSIDER THIS	Managing Water across National Borders	471

17 Getting Practical about Introduced Species 475

	Routes of Species Introduction	477
	From Introduction to Invasion	479
	The Tens Rule	480
	Why the Tens Rule May Provide False Comfort	481
	Toward a Predictive Theory of Invasiveness and Invasibility	482
	The Effects of Introduced and Invasive Species	486
	Changes in Ecosystem Processes and Patterns of Disturbance	486
	Threats to Native Taxa	488

BOX 17.1	Has Tamarisk Been Wrongly Vilified?	490
	Effects on Biodiversity at Local Scales	491
	Effects on Biodiversity at Regional and Global Scales	492
	Economic Effects	493
	A Pragmatic Approach to Reducing and Managing Species Introductions	496
	Prevention: An Ounce of Prevention Is Worth a Pound of Cure	496
BOX 17.2	Will the Impending Invasion of Asian Carp into the Great Lakes Be Prevented?	498
	Eradication: Shoot First, Ask Questions Later	499
	Managing Established Invaders: In It for the Long Haul	502
CONSIDER THIS	Should Species Be Judged by Their Effects Rather Than Origins?	502

18 Climate Change Demands New Conservation Strategies 506

	A Climate Primer: Factors That Control Earth's Temperature	507
	Evidence of Recent Global Climate Change	508
	How Are People Changing the Global Climate?	512
	What Do Models Project for the Future Climate?	514
BOX 18.1	Will a Better-Informed Public Be More Likely to Support Emissions Reductions?	516
	Observed Biological Impacts	519
	What Models Project about Future Biological Impacts	522
	Climate Change Is Already Disrupting the Delivery of Key Ecosystem Services	524
	Provision of Fresh Water	524
	Protection from Coastal Flooding	525
	Disease Regulation and Human Health	526
	Food Production	526
	How Conservationists Can Respond to Climate Change	528
	Mitigation	528
BOX 18.2	Could Geoengineering Provide Solutions to Climate Change?	532
	Adaptation	534

CONSIDER THIS Will Assisted Migration Become Mainstream in the Face of Climate Change? 537

19 Making Conservation a Success Story 541

Ingredients for Conservation Success 544

Revitalizing the Traditional Conservation Approach: Protected Areas 545

Expanding the Conservation Toolbox 547

Leveraging Corporate Concern for Reputation into Action for Nature 547

Leveraging Consumer Preferences into Truly Sustainable Practices 549

Leveraging Concern for Humanity into Action for Nature 551

Broadening Public Support for the Conservation Movement 553

Embracing Human Diversity 554

Connecting Future Generations to Nature 555

BOX 19.1 Will Biophilia Drive the World toward Conservation Success? 556

Offering a Positive Vision for the Future 558

The Anthropocene as a Call to Action 561

BOX 19.2 The Outlook for Human Population Growth 562

CONSIDER THIS Evidence-Based Science Will Drive Conservation Success 565

Glossary 569
