

9. TECHNOLOGY CORNER

RESIDUAL PLOTS ON THE CALCULATOR

TI-Nspire instructions in Appendix B; HP Prime instructions on the book's Web site.

Let's continue the analysis of the Ford F-150 miles driven and price data from the previous Technology Corner (page 171). You should have already made a scatterplot, calculated the equation of the least-squares regression line, and graphed the line on your plot. Now, we want to calculate residuals and make a residual plot. Fortunately, your calculator has already done most of the work. Each time the calculator computes a regression line, it also computes the residuals and stores them in a list named RESID. Make sure to calculate the equation of the regression line *before* using the RESID list!

1. Display the residuals in L3(list3).

- With list3 highlighted, press $\boxed{2\text{nd}} \boxed{-}$ (VAR-LINK), arrow down to STATVARS, and select the RESID list.

F1=	F2=	F3=	F4=	F5=	F6=	F7=
Totals	Tests	List	Calc	Dist	Tests	Ints
list1	list2	list3	list4			
70583	21994	-4764.				
129484	9500	-7662.				
29932	29875	-3506.				
29953	41995	8617.8				
24495	41995	7728.6				
75678	28986	3058.2				
list3[1] = -4763.8548348529						
MAIN	RAD	AUTO	FUNC			2/2

2. Turn off Plot1 and the regression equation. Specify Plot2 with L1/list1 as the x variable and L3/list3 as the y variable. Use ZoomData to see the residual plot.

The x axis in the residual plot serves as a reference line: points above this line correspond to positive residuals and points below the line correspond to negative residuals.

Note: If you don't want to see the residuals in L3/list3, you can make a residual plot in one step by using the RESID list as the y variable in the scatterplot.
